

OASIS B4524
Self-Service

The Oasis Collection

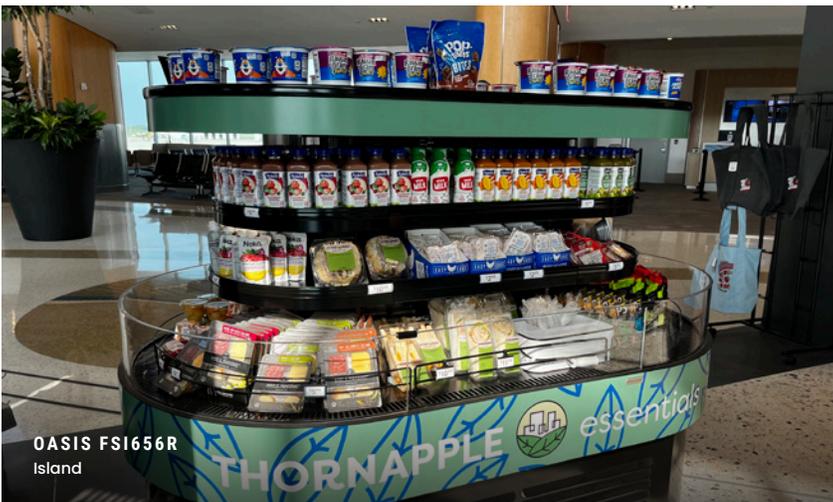

The line of Oasis merchandisers focuses on the modern consumer's fast-paced lifestyle and offers a self-service model for any application.

Provide clear visibility to products with displays and merchandisers that are designed to be positioned throughout any footprint to encourage impulse purchases.

Under Counter

Under counter refrigerated grab & go display cases are ideal to drive impulse sales and capitalize on quick transactions.

Islands/Endcaps

Oasis islands are perfect for drawing customers in throughout supermarkets, also ideal for use in hospitals, schools, and arenas. Mobile, self-contained refrigerated islands easily create impulse-buy sites, providing daypart merchandising flexibility and the ability to cross merchandise through departments.

Deliver versatile **one-stop shopping** for customers and **increase revenue opportunities** for drop-in programs requiring new displays.

Hot & Cold Combinations

The newest Oasis self-service case is the ultimate vertical combination of grab & go refrigerated and heated display, meeting ADA compliance on all levels and providing both hot and cold temperatures in the same case to maximize impulse purchases and elevate the customer's experience.

While affording operators the flexibility to relocate the merchandiser to different areas, it also has optimal hot holding capabilities. The temperature of each heated shelf can be individually controlled allowing more diversity in what products are held and to what degree.

Micromarket

Oasis also offers self-monitoring, grab and go, micromarket models that continuously measure the temperature of the food inside and automatically restrict access to the case if temperatures become unsafe. A fitting solution for unstaffed markets like corporate dining and hotel lobbies.

Produce Cases

Refrigerated self-service produce cases are designed specifically to place farm fresh produce in easy-to-access locations with cutaway or mirrored end panels to draw attention to the product inside. With the option of self-contained refrigeration, operators have the flexibility to relocate the merchandiser throughout the store.

Benefit from foot traffic by maximizing refrigerated versatile displays that draw in the consumer.

Refrigerated Self-Service Cases with Swing Doors

Containing the same in-house pioneered, award-winning self-contained refrigeration technology found in our open coolers, these door-equipped merchandisers require less energy to operate, while providing the same presentation and pack out of fresh food.

Refrigerated Self-Service Cases

Refrigerated self-service cases are ideal for grab & go items in convenience stores and other businesses and institutions such as hospitals, colleges and universities, airports, and corporate dining. Available in narrow depth sizes that can be easily designed into smaller spaces making delivery and installation more convenient.

Perfectly lit, easy to clean, and effortless to restock, these grab & go display merchandisers are a great addition to any space.
